The OpUs Verte is the only all plastic, pre-compression trigger sprayer, made of PCR-resin, which is available in multiple colours. The sprayer is developed to reduce overall virgin plastic resin consumption by at least 50%. Although being made with recycled plastics, the OpUs Verte maintains the same high performance you would expect. Most PCR based sprayers are available in black or dark grey only, however, OpUs Verte is available in various colour options, even in white. Now comes together with a 500ml or 750 ml rPET bottle companion option.

What are the benefits?

- Made with PCR resin
- Many colour variations available
- Powerful pre-compression dispensing; premium spray & foam patterns, minimal fall-off, perpetually primed
- Durable all-plastic construction
- Continuous thread/screw-on and snap-on neck finishes available
- Variety of spray and foam patterns available
- Range of optional features including 360° spraying, labelling and passive venting
- Certified child-resistant trigger sprayers in Europe and the United States
- Multiple outputs available
